## Profile

Full Stack Developer with over four years of experience on web applications in production. I mainly work with **React, TypeScript, JavaScript, Laravel and PHP**: responsive interfaces, dashboards and data-heavy tables, REST APIs, databases and integrations with external systems.

I enjoy the whole stack, from frontend to servers, and I like learning. I run projects independently, from client requirements to release with **Docker** on Linux, and I explore **LLMs and AI agents** through prototypes.

## Professional experience

### Full Stack Developer - PARENTESIKUADRA

*Dec 2023 - Present*

Casale Monferrato | Hybrid

- Develop and maintain Laravel and React/Inertia.js applications in production; created the internal template 10 projects have started from, so they start faster.
- Sole developer of Klancy, a multi-tenant SaaS for restaurant kitchens used by dozens of clients, with thousands of orders a day. Migrated it from legacy PHP, with a separate repository per client, to a single Laravel and React codebase configured per tenant; WebSockets replaced polling in the order dashboard.
- Built a purchase-order system for a public body in React and TypeScript: approvals across offices with six roles, PDF printing and supplier invoices received through SOAP.
- Built a deployment panel (React, Node.js, BullMQ) that cut the installation of an accounting suite from 5-7 hours to under 20 minutes.
- Integrate REST APIs (Fluida, Tilby), AHRW SOAP services, XML exports for G1 and Stripe payments.
- Containerise applications with Docker, ship releases, and run 10 VPSs and the VMs on 2 company servers (Linux/Plesk), including migrations.
- Work in Agile sprints with colleagues on backend and frontend; helped train a junior developer in 2025-2026.

### Junior Full Stack Developer - PARENTESIKUADRA

*May 2023 - Dec 2023*

Casale Monferrato | On-site | Internship

- Built a SaaS for short-term rental management in Laravel and React: Booking and Airbnb reservations, Telegram notifications for the manager and cleaning staff, tourist tax, invoice export to G1, charts and monthly statements for property owners.
- On a legacy PHP application for a rubber goods manufacturer, digitised the production sheet, replacing the paper one, and linked it to quotes, and fixed bugs and added features in the step-by-step configurator.

### Junior Full Stack Developer - Syrma Soluzioni Informatiche S.r.l.

*Sep 2022 - Apr 2023*

Turin | On-site | Full-time

- Drupal back office of a rescue helicopter app that assesses nearby webcam images with AI: PHP modules for feedback and email, CSS and JavaScript on the operators' interactive map.
- eSports tournament app in React Native with a Drupal backend: tournament screens (list and detail), credit purchases and a Stripe payment module.

## Education

### Computer Science degree course - University of Turin

*2019 - 2022*

Turin | Three years attended, left to start working

### Diploma in Computer Science - ITIS Ascanio Sobrero

*2014 - 2019*

Casale Monferrato

## Technical skills

**Frontend:** React | TypeScript | JavaScript | Inertia.js | HTML5 | CSS3 | Tailwind CSS | TanStack Table | charts and dashboards | responsive design | accessibility (WCAG AA) | PWA | React Native | Vitest

**Backend and databases:** PHP | Laravel | Node.js | Fastify | PostgreSQL | MySQL | Redis | BullMQ | Pest | PHPStan

**APIs and integrations:** REST APIs | authentication and roles (Sanctum, Fortify) | WebSockets | SOAP | XML | Stripe

**DevOps and systems:** Docker | Linux | Plesk | SSH | cron | Restic | GitHub Actions | Git | Composer | npm

**Artificial intelligence:** Prototypes and automation using LLMs | AI agents | MCP | RAG | GraphRAG | Claude Code | Codex
